

**Amendments to the Claims:**

The following list of claims will replace all previous versions and listings of claims:

**Claims:**

Claim 1. (currently amended): A kit for use by a person to apply a daily treatment of medication and therapy to remove a corn or callus from the person's skin, the kit comprising:

- (a) a box having a decorative design thereon;
- (b) an AM treatment system removably disposed within said box; said AM treatment system comprises a plurality of AM foam bandages each having a ~~medicated pad of~~ hydrocolloid pad; said AM treatment system further comprises a release strip removably engaged with each of said AM foam bandages;
- (c) a PM treatment system removably disposed within said box; said PM treatment system comprises a plurality of PM foam protective covers and a plurality of PM medicated patches having salicylic acid; said PM treatment system further comprises first and second backing strips engaged with said PM foam protective covers and said PM medicated patches, respectively; and
- \_\_\_\_\_ (d) whereby the person may apply the AM treatment system to the corn or callus when active ~~such as in the morning~~ and apply the PM treatment system when inactive ~~such as at night~~.

Claim 2. (currently amended): The kit of claim 1, wherein said AM treatment system comprises an AM package adapted to individually seal said AM foam bandages.

Claim 3. (original): The kit of claim 2, wherein said PM treatment system comprises first and second PM packages to seal said PM medicated patches and said PM foam protective covers, respectively.

Claim 4. (currently amended): The kit of claim ~~[[4]]~~ 1, wherein said PM medicated patches are 40% by weight of salicylic acid.

Claim 5. (original): The kit of claim 4, wherein said AM package and said first and second PM packages are different colors.

Claim 6. (original): The kit of claim 5, wherein each of said AM and first and second PM packages are made from paper.

Claim 7. (original): The kit of claim 6, wherein said AM foam bandage is made from foam.

Claim 8. (original): The kit of claim 7, wherein said PM foam protective cover is made from foam.

Claim 9. (new): A kit for use by a person to apply a daily treatment of medication and therapy to remove a corn or callus from the person's skin, the kit comprising:

- (a) a container;
- (b) a plurality of foam bandages disposed within the container, each of said foam bandages comprising a hydrocolloid pad and a release strip removably engaged with each of the foam bandages;
- (c) a plurality of patches disposed within the container, each of the patches medicated with salicylic acid for applying to and treating the corn or callus, each of the medicate patches adapted for being trimmed to conform to the shape and size of the corn or callus; and
- (d) a plurality of foam protective covers disposed in the container for positioning over the medicated patches for limiting migration of the salicylic acid.

Claim 10. (new) A kit according to claim 9, wherein the person may apply the foam bandages to the corn or callus when active, and apply the medicated patches when inactive.

Claim 11. (new): A kit according to claim 9, wherein the medicated patches are about 40% by weight of salicylic acid.

Claim 12. (new): A kit according to claim 9, wherein the medicated patches comprise a non-woven material.

Claim 13. (new): A kit according to claim 9, wherein each of the medicated patches are adhered to a first backing strip.

Claim 14. (new): A kit according to claim 13, wherein each of the foam protective covers are adhered to a second backing strip.

Claim 15. (new): A method of treating a corn or callus on a person comprising the steps of:

- (a) providing a plurality of foam bandages, each of said foam bandages comprising a hydrocolloid pad and a release strip removably engaged with each of the foam bandages;
- (b) providing a plurality of patches medicated with salicylic acid;
- (c) trimming one of the medicated patches to conform to the shape and

size of the corn or callus and applying the patch to the corn or callus during a time of inactivity of the person;

- (d) providing a plurality of foam protective covers;
- (e) covering the applied medicated patch with the one of the foam protective covers to limit migration of the salicylic acid;
- (f) removing the applied medicated patch and protective cover; and
- (g) applying one of the foam bandages to the corn or callus during a time of activity of the person.
